SUMMARY & RESEARCH FOCUS

Interventional cardiologist and Fellow at Zhongshan Hospital, Fudan University.

Scientific Secretary of the National Basic Science Center for Panvascular Interventional Complex Systems under the leadership of Prof. Junbo Ge (CAS Academician), coordinating national research initiatives.

Research integrates biomedical engineering and clinical cardiology, focusing on translational medicine, large animal models (swine/canine) for preclinical validation to clinical investigation of novel interventional devices and flexible electronic systems.

Advancing the 'Device-Vessel Suitcordance' framework to promote precision device-vascular matching and accelerate bench-to-bedside translation.

News

[Jul 2026] Preparing for an upcoming research visit to the group of Prof. Patrick W. Serruys at University of Galway, Ireland (documentation in progress).

[Aug 2026] Our nationwide cohort study of intra-aortic balloon pump use in acute myocardial infarction with Killip class III or IV was published in Biomarker Research (Volume 14, Article 97): 37,477 patients from the China Chest Pain Center Database.

[Aug 2026] Our article on intelligent photonics and digital twins in panvascular disease was published online in Light: Science & Applications (Volume 15, Article 335).

[Mar 2026] Thrilled to receive the Best Cover Article Award (2024-2025) from Advanced Fiber Materials (IF: 22.6) for our work on intelligent panvascular fibers!

[Feb 2026] Entrusted by Academician Junbo Ge, I am currently in Europe visiting esteemed professors and long-standing international collaborators.

[Jan 2026] Our work on the "FLOW Framework" was accepted by Science Bulletin.

[Jan 2026] Presented at CSI America 2026 in Orlando, USA.

[2026] New paper published in npj Flexible Electronics.
